

Question Bank

1. What is a Client/Server Model?
2. What is a server?
3. What is an IP address?
4. What is the difference between IP address and MAC address?
5. Give two differences between TCP and UDP
6. Explain the Client/Server model with a suitable diagram
7. Explain Internet communication in detail
8. Explain IP addressing and its types.
9. Explain MAC addresses and their importance.
10. Explain the role of networking in IoT.
11. Design a Smart Agriculture system using IoT Design Methodology.
12. Explain Domain, Information and Service in IoT.

MCQ's

In the Client/Server model, the client primarily:

- A. Provides services to the server
- B. Requests services from the server
- C. Controls the network router
- D. Stores all network data

Which device generally provides services to clients?

- A. Client
- B. Server
- C. Sensor
- D. Switch

Which of the following is an example of a client application?

- A. Web browser
- B. Web server
- C. Database server
- D. Mail server

Which protocol is primarily used for communication on the Internet?

- A. IP
- B. HTML
- C. USB
- D. HDMI

IP stands for:

- A. Internet Process
- B. Internet Protocol
- C. Internal Protocol
- D. Information Processing

Which is an example of an IoT function?

- A. Reading a sensor
- B. Choosing a font
- C. Opening a text editor
- D. Formatting a document

An operation in IoT represents:

- A. A detailed activity performed by a component
- B. A domain name
- C. An IP address
- D. A user password only

Component integration means:

- A. Connecting different IoT components to work together
- B. Removing sensors
- C. Deleting software
- D. Changing IP addresses only

Which of the following can be an IoT component?

- A. Sensor
- B. Actuator
- C. Microcontroller
- D. All of the above

Which component converts a physical parameter into a measurable signal?

- A. Sensor
- B. Actuator
- C. Router
- D. Server
